

WEB · TELEGRAM · DISCORD · SLACK

One ATS. Four surfaces. One hiring identity.

WeRemotelT is a chat-native application tracking system — post jobs, score applicants, pipeline stages, interviews, and messages on web or in the apps teams already live in.

Web

Full portal — jobs, pipeline, contracts, billing.

Telegram

Hire or apply in @WeRemotelTbot — create or link.

Discord

Link-only — same portal profile via OAuth.

Slack

Workspace bot for alerts and hiring loops.

CHANNELS ARE UIS — NOT SEPARATE ACCOUNTS

Link once. State lives in the database.

Web-first

Register on the portal, then Connect Telegram / Discord / Slack from Settings. Bots read the web profile — no second login.

Telegram-first

Start in @WeRemotelTbot as talent or client. Optional later link to a richer web account. Mini app opens the same profile.

Discord · link only

Discord never creates a portal row alone. OAuth attaches Discord to an existing web profile via `platform_links`.

Drafts, jobs, applications, and messages sync across channels — start a job draft on Telegram, finish pay or edit on web (and vice versa).

CLIENT CAPABILITIES

Post, score, pipeline, and reply — in chat.

In Telegram (and portal)

- `/post_job` — step-by-step draft wizard
- `/applicants` — per-job list, match %, top candidates
- Shortlist · Interview · Reject pipeline buttons
- `/workspaces` — switch company when multi-tenant
- Daily applicant digest + instant apply alerts

ATS surfaces (all channels)

- Applicant pipeline with status + AI match scores
- Interview scheduling with reminders across channels
- Threaded messaging on the application — not a random DM
- Real-time alerts on portal, Telegram, Discord, Slack
- Same application IDs everywhere

Company billing and jobs stay company-scoped. Bot actions resolve the linked profile, then the active workspace.

APPLY AND REPLY WITHOUT LEAVING CHAT

CV in Telegram. Fit scores. One thread per application.

Talent in chat

- Send résumé in Telegram — parse into profile
- Browse jobs, see AI match %, Quick Apply
- `/my_applications` — track status
- Pipeline updates land in portal inbox + linked bots

Cross-channel messaging

- Reply button on notifications — no UUIDs required
- `/reply` picker when you need to choose a thread
- Same `application_messages` rows as the portal
- Start on bot, finish on web — drafts and jobs resume

One portal login ↔ one Telegram id ↔ one Discord account. Separate talent vs client emails need separate channel accounts.

TRY THE SURFACES

Open the portal — or start in your messenger.

Pair with AI Matching and Escrow PDFs for the full hire → score → pay loop.
